Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB7789 represent sequences used in the exemplification of the

                                                                                                                        This sequence represents cDNA encoding human chemokine receptor CXCR3b, CC a splice variant of chemokine receptor CXCR3 (also referred to as CC CXCR3a). Chemokines are a family of small cytokines which bring about the recruitment of leukocytes during inflammation. The CXC chemokines CC mostly attract neutrophils, while the CC chemokines are less selective. All chemokine receptors are seven transmembrane G-protein coupled CC receptors and most are receptors for a number of chemokines, CXCR3a CC being a receptor for the CXC chemokines IP10 and Mig. CXCR3a is CC expressed in activated, but not in resting T-lymphocytes, and may CC therefore play an important role in the selective recruitment of CC T-cells which occurs in T-cell mediated inflammatory conditions. CC CXCR3b may have an altered pattern of tissue distribution and CC concion in the inflammatory process. Cells expressing the active CC CXCR3b may have an altered pattern of tissue distribution and CC continuities, of a chemokine receptor. In addition, the receptor CC citation of the complexity of the composition of chemokines responsible for mediating CC inflammation reactions via interaction with CXCR3b. The modulation CC inflammatory responses is of therapeutic benefit in many conditions CC can distington the receptor. In addition, delayed type hypersensitivity reactions, atherosclerosis and restenosis.

                                                                                                                                                                                The mammalian CXC chemokine receptor 3 (CXCR3) gene encodes a protein which can selectively bind one or more chemokines and can mediate cellular signalling and/or a cellular response in response. Inhibitor and promoters of mammalian CXCR3 can be detected and identified using host cells expressing CXCR3. CXCR3 inhibitors can be used for treatment of inflammatory diseases which are T cell mediated. CXCR3 promoters
                                                                                                                                                                                                                                                                         which, are useful for treatment of i anti-viral therapy

9 cr Halo and Ala Properties are useful for containing the second constitutively articular GPCR are useful for containing diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be used the endogenous containing an exemplification of the invention. This was cloned and containing a mutant of the invention.

9 cr Ala, and is a preferably Lys. When the endogenous containing a mutant of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90677 and AAY90683-Y90687), and to DNA encoding them (AAA30709-A39743 and AAA30775-A30779). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, x, is substituted for an endogenous residue in IC3 at a position 16 amino

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCR8, AAY90643-CC AAY90677 and AAY90683-Y90687), and to DNA encoding them (AAA30709-A30743 CC and AAA30775-A30779). The mutant proteins of the invention contain a CC mutation in a portion of the protein comprising intracellular loop 3 CC (IC3) and transmembrane domain 6 (7M6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino CC acids N-terminal of an endogenous proline in TM6 to form a sequence CC X-(AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg CC or Ala, and is preferably Lys. When the endogenous residue at this CC position is Lys, this residue is replaced by His, Arg or preferably Ala. CC The 15 amino acid stretch between the substituted amino acid and the Pro CC may be endogenous, non-endogenous, or a mixture of endogenous and con-endogenous residues. The constitutively active GPCR8 are useful for identifying antagonists, agonists and partial agonists for use as CC pharmaceutical agents. The mutant proteins are also useful in research constituing the roles of the receptors in normal and CC diseased conditions. Antagonists for a particular GPCR are useful for the novel mutant GPCRs are constitutively active, they can be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Вp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT
                             or development e.g. inflammatory conditions such as asthma. Chemckines are important in immune and inflammatory responses in that they induce laukocyte migration and adhesion. They are also chemoattractants for several cells involved in inflammation and can induce other biological responses e.g. modulation of second messenger levels (e.g. Ca++), cellular morphology modification responses, phosphoinositide lipid turnover, possible antiviral responses etc. The chemokine receptors of the invention exhibit structural properties of G-protein coupled receptors (GPCR), although their ligands have not yet been identified. The chemokine and chemokine receptor polypeptides are useful to produce ligand: receptor complexes in vivo or in assay techniques. Assays may also involve chemical antagonists which block complex production or
                                                                                                                                                                                                                                      This represents a rodent chemokine receptor HST01.1 nucleotide sequence. The invention provides novel primate and rodent chemokines and chemokine receptors. The chemokines, receptors and binding compounds (optionally antibodies/fragments specifically binding the chemokines) are useful therapeutically to treat conditions associated with abnormal physiology of the property of the conditions associated with abnormal physiology.
                                                                                                                                                                                                                                                                                                                                                                         Rodent and primate chemokines and chemokine receptors - useful diagnostically and therapeutically to treat conditions associated with abnormal physiology or development e.g. inflammatory conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1090

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (especially neurons, macrophages or lymphocytes) to treat e.g. abnormal proliferation, regeneration, generation and atrophy. The polypeptides are also used to produce antibodies useful diagnostically, for drug screening or for polypeptide purification. The polynucleotides are useful oproduce probes for detecting the polypeptides, and to isolate the polypeptides or related sequences, especially from other species. They also allow transformation of cells for polypeptide production.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
The invention relates to identifying modulators of receptor activity using orthologues of human receptors by contacting a compound with receptors from two species, and measuring the effect of the compound on the receptors. Included is an isolated nucleic acid (I) comprising a nucleotide sequence encoding bradykinin B1 receptor (II); or encoding a CXCR2 receptor (III). The method is useful for identifying a compound having dual specificity to modulate the activity of a desired polypeptide in two different species. The method is useful for identifying a non-human animal model for testing compounds with potential efficacy as human receptor modulators. The method comprises contacting a test compound with receptors from at least two species; measuring an effect of the compound on the receptors; and selecting an animal model representing a species
                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying modulators of receptor activity using orthologues of human receptors by contacting a compound with receptors from two species, an measuring the effect of the compound on the receptors -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; baboon; chimpanzee; vervet monkey;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 having a receptor that exhibits the desired effect when contacted with the test compound. Also described is a method for identifying a compound that modulates (II) or (III) activity, where a compound is an agonist, antagonist, suppressor, inhibitor and inducer, useful in treatment of pain and inflammation and other receptor related pathologies. ABK16569-ABK1659-ABK1659 represent bradykinin 1 and CXCR2 receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1068
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         coding sequences
                                                                                                                          589
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                No.:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                      This is the nucleotide sequence of murine cDNA coding for a Burkitt's lymphoma receptor 1 (BLR1, see AAV06643). The invention relates to methods for modulating the interaction of BLR1 with its ligand, B lymphocyte chemoattractant (BLC, see AAV06641). The methods comprise combining BLR1 and BLC polypeptides with a candidate modulator agent under conditions whereby, but for the presence of the agent, the polypeptides engage in a first interation, and determining a second interaction of the polypeptides in the presence of the agent, wherein a difference between the first and second interactions indicates that the agent modulates the interaction of the polypeptides. The modulator is preferably an antagonist, especially dominant negative, form of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1009

                                                                                                                                                           The invention relates to identifying modulators of receptor activity CC using orthologues of human receptors by contacting a compound with receptors from two species, and isolated nucleic acid (I) comprising a conceptors. Included is an isolated nucleic acid (I) comprising a conceptor (III). The method is useful for identifying a compound CC CXCR2 receptor (III). The method is useful for identifying a compound CC axing dual specificity to modulate the activity of a desired polypeptide in two different species. The method is useful for identifying a non-cc human animal model for testing compounds with potential efficacy as human creceptor modulators. The method comprises contacting a test compound with receptors from at least two species; measuring an effect of the compound con the receptors; and selecting an animal model representing a species chaving a receptor that exhibits the desired effect when contacted with the test compound. Also described is a method for identifying a compound contacted that modulates (II) or (III) activity, where a compound is an agonist, and inflammation and other receptor related methologies and apprises.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1078
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1021

                                         Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of identifying compounds which bind to polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention Although novel, many of the polypeptides of the invention have homology to known proteins, thereby glving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities, stem cell growth factor activity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        myeloid cell disorder; lymphoid cell disorder; asthma; arthritis; chronic inflammatory condition; proliferative retinopathy; atherosclerosis; coronary heart disease; arterial ischaemia; bone disorder; osteoporosis; vascular growth disorder; tissue regeneration; wound healing; infection; immune disorder; cell culture; drug screening; gene therapy; antiinflammatory; antiasthmatic; antiarthritic; haemostatic; antiarteriosclerotic; cytostatic; osteopathic; vasotropic; cardiant; virucide; antibacterial;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC involved in oncogenesis, cancer cell proliferation or metastasis.

CC Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cc cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell conditions, ceronic inflammatory conditions (e.g., asthma or arthitis), croliferative retinopathy, atherosclerosis, coronary heart disease, carterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal cc vascular growth. Polypeptides involved with tissue regeneration and crepair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with conditions are disorders.

CC bacterial and fungal infections in addition to immune disorders.

CC Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, can autoimmune disease or accidental damage. The polypeptides and nucleotides can status to ease of the above conditions, and in drug covel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  thrombolytic activities;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) Is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical

      The invention relates to single nucleotide polymorphisms in the human interleukin 8 receptor beta (ILBRB) gene. A method for haplotyping the ILBRB gene in an individual comprises identifying the nucleotide at one or more polymorphic sites and determining whether one of the copies of the gene is defined by one of the ILBRB haplotypes given in the specification or whether both copies are defined by a haplotype pair. This method is useful in genotyping, whereby all possible haplotype pair can be assigned to specific genotypes. An association between a trait are
                                                                                                                                                                                      New polymorphic variants comprising isogene, useful in expressing ILBRB candidate drugs to treat diseases re

IL8RB and its corresponding DNA are used for studying the expression and function of IL8RB for use in screening for candidate drugs to treat diseases related to IL8RB activity, such as chronic obstructive pulmonary disease and other inflammatory disorders. The sequences are also useful for studying the effect of variation on the biological activity of IL8RB as well as on the binding affinity of candidate drugs targeting IL8RB. This sequence represents genomic DNA encoding TL8RB.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                receptors from two species, and measuring the effect of the compound on the receptors. Included is an isolated nucleic acid (I) comprising a nucleotide sequence encoding bradykinin B1 receptor (II); or encoding a CCXCR2 receptor (III). The method is useful for identifying a compound that a pecificity to modulate the activity of a desired polypeptide in two different species. The method is useful for identifying a non-numan animal model for testing compounds with potential efficacy as human receptor modulators. The method comprises contacting a test compound with receptors from at least two species; measuring an effect of the compound on the receptors; and selecting an animal model representing a species having a receptor that exhibits the desired effect when contacted with the test compound. Also described is a method for identifying a compound that modulates (II) or (III) activity, where a compound is an agonist, antagonist, suppressor, inhibitor and inducer, useful in treatment of CC antagonist, suppressor, inhibitor and inducer, useful in treatment of CC ABK16574 and ABK16589-ABK16599 represent bradykinin 1 and CXCR2 receptor realing seminance of the incontion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1068
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         coding sequences of the invention.

This probe was designed based on the sequence derived from the second transmembrane domain of G-protein-coupled receptors. After tertiary screening, six plaques were isolated. The insert of one of these plaques, termed F3R was of 2.5 kb in size. This insert was sequenced. The protein deduced from the F3R clone demonstrates that it belongs to the family of G-protein-coupled receptors. The deduced protein sequence indicates seven putatuve transmembrane segments. A human peripheral blood leukocyte lambda gtll cDNA library (5' stretch) was screened with a 652 bp EcoRJ/Bambl fragment (including nucleotides several human clones which hybridized to the rabbit IL-8 probe were isolated. The insert of one such clone, termed 4AB was

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB seq
